

January 2022: Volume 18: Number 1

Glyphosate contaminated grain feeding of dairy cows introduces odd-chain fatty acids with branched chain amino acids into metabolism via the TCA cycle and disrupts mitochondrial proton tunneling by high deuterium metabolic water production with health compromising effects in the human consumer.

[Lech, J.C., Dorfsman, S.I., Répás, Z., Krüger, T.P.J., Gyalai, I.M., & Boros, L.G. \(2021\) What to feed or what not to feed-that is still the question. Metabolomics 17: 102](#)
